STAFF REPORT
Community Planning and Preservation Commission
Certificate of Appropriateness Request

Report to the Community Planning and Preservation Commission from the Urban Planning and Historic Preservation Division, Planning and Development Services Department, for Public Hearing and Executive Action rescheduled to Tuesday, June 9, 2020 at 2:00 p.m., by means of communications media technology pursuant to Executive Order 20-69 issued by the Governor on March 20, 2020, and Executive Order 2020-12 issued by the Mayor on April 9, 2020. Everyone is encouraged to view the meetings on TV or online at www.stpete.org/meetings.

According to Planning and Development Services Department records, no member of the Community Planning and Preservation Commission resides or has a place of business within 2,000 feet of the subject property. All other possible conflicts should be declared upon the announcement of the item.

AGENDA ITEM: Approval of a Certificate of Appropriateness for alterations to a contributing resource to the Kenwood Section – Northwest Kenwood Local Historic District (18-90300008)

CITY FILE NO.: 20-90200007

REQUEST: Construction of 360 square foot accessory living space; and
Construction of a front yard fence.

OWNER: Austin Grinder
PARCEL ID NO.: 14-31-16-46350-014-0110
PROPERTY ADDRESS: 3228 8th Avenue North
LEGAL DESCRIPTION: KENWOOD SUB ADD BLK 14, LOT 11
ZONING: NT-2
Historic Significance and Existing Conditions

The frame vernacular house at 3225 8th Avenue North ("the subject property") is listed as a contributing resource to the Kenwood Section – Northwest Kenwood Local Historic District (18-90300008). It is additionally recorded as FMSF no. 8PI07580, a contributing resource to the Kenwood National Register District.

The subject property was relocated to its current site in 1932 by real estate investor R.W. Baughman from its original location on the 200 block of 44th Avenue North. It appears to have been constructed circa 1925-1926.

The area of its original location, an area sometimes referred to as City Gardens, was platted for residential development in conjunction with the 1925 construction of the Gandy Bridge’s that promised a speedy crossing over Tampa Bay for the first time. The north St. Petersburg neighborhood of City Gardens, like many other neighborhoods on the outskirts of the city, was not fully developed during the 1920s due to the crash of the Florida Land Boom and the subsequent Great Depression. The Kenwood area is now home to a number of residential buildings that were constructed by speculators during the 1920s boom and then relocated to the more established neighborhood during the Great Depression.

The house is frame vernacular, meaning it features no formal or academic architectural style, but rather is architecturally significant for its embodiment of materials and craftsmanship of its region and era of construction. It features a side-gabled form with an integral front porch at its southeastern corner, or the right side of the façade. It is one story in height with clapboard siding, a brick chimney at its west gable end, and a composition shingle roof. Windows are one-over-one and appear to be fairly recent replacements of historic double-hung sash units. Two independent one-over-one windows have been installed to replace the tripartite unit of six-over-one windows at the façade since the time of a 1995 survey of the neighborhood.

Alley-facing accessory buildings are typical to the district. One-story, single-car garages of approximately 250 to 300 square feet appear to be most common, though examples of larger and even two-story garage apartments are present. Permit records indicate that a one-car frame garage was constructed at the subject property in 1932 when the house was relocated to the site. As shown in Figure 1, detached garages with minimal setback from the alleyway were typical of the block during the historic era.
The 1932 garage building was demolished at an unknown date, likely prior to 1968, as a permit was issued that year for the construction of a carport. The current proposal includes demolition of this carport, as well as the construction of a new accessory building with general similarities of size, design, and orientation/location on the parcel to historic garage buildings visible in Figure 1.

Project Description and Review

Project Description

New Accessory Building

The application proposes the demolition of a circa 1968 carport and construction of a detached, 360 square foot accessory building. The new accessory building will be located near the northwest corner of the subject parcel, featuring a six-foot rear setback from the alley and a five-foot side setback from the western property line.

The new building will not feature alley-facing garage doors as is most typical of accessory buildings in the district. Rather, the alley-facing (north) elevation will feature two false windows and flower boxes (Figure 2). This will be the sole elevation that is located outside of the property’s fence line, and, therefore, directly visible from elsewhere in the district. It is, however, important to note that this exposed elevation will face the alley, which is dominated by buildings of utilitarian, albeit often historically significant, design (Figure 3).
The building’s entrance will face the interior of the subject property, with dual-action paneled doors flanked by two windows at the south elevation (Figure 4).

The building’s form will be that of a rectangle with a single, front-gabled roof, which is in keeping with accessory buildings throughout the district.

According to the application (Appendix A), the proposed new construction will feature the following:

- A rectangular footprint of 18’ by 20’;
- A single-story front-gabled roof facing the alleyway. The building’s height will be 10’, 4.5” at the beginning of roofline and 14’, 1.5” at its peak;
A concrete slab-on-grade foundation and wood frame construction;
Four-over-four single-hung sash windows with vinyl frames and internal muntins;
Fiber cement (Hardie plank) lap siding and PVC trim exterior; and
Asphalt shingle roofing.

**Front Yard Fence**
The applicant has additionally proposed to construct a fence around the subject property’s front yard with the following characteristics:
- Total height of 3’;
- Design to replicate the existing (non-historic) railing at the front porch with flat, 2x6 top rails topping 2x4 pickets;
- 5’, 6” gate at front walkway;
- Materials to be wood and will be painted.

According to the COA Matrix, fences in front of a historic landmark’s façade require approval by the Community Planning and Preservation Commission, unlike side and rear fences which can generally be approved administratively.

**General Criteria for Granting Certificates of Appropriateness and Staff Findings**

1. *The effect of the proposed work on the landmark or the property upon which such work is to be done.*

**Carport Demolition: Consistent**
A frame one-car garage was constructed at the subject property in 1932, concurrently with the house’s relocation from its original site to Kenwood.
The 1932 garage is visible in the 1951 Sanborn map (Figure 1) of the area. Its demolition date is unknown.
Permit records show that the carport was constructed in 1968.
Although constructed in the historic period, the carport is not a style or form typical to the subject district. Further, it is not the original accessory structure associated with the primary residence at the subject property.

**New Accessory Building: Consistent**
According to analysis done at the time of the district’s designation in 2018, approximately 57% of contributing properties featured accessory structures in addition to the primary building.
Garages and garage apartments are the most common forms of accessory structures within the subject district.
Although it will not feature alley-facing garage doors, the proposed building form generally replicates the simple front-gabled one-car frame garage buildings that are common throughout the subject district.
Front Yard Fence: Inconsistent

Front fences are less common than open front lawns within the subject district and larger Kenwood neighborhood. In a planned 1920s streetcar suburb with relatively generous parcel sizes for the period such as Kenwood, this openness throughout the front setback was likely prevalent during the period of significance. However, the proposed fence is fairly low at three feet, replicates the design of existing porch railing, and is a reversible element that will not affect the historic building.

2. The relationship between such work and other structures on the landmark site or other property in the historic district.

Carport Demolition: Consistent

The carport is not visible from elsewhere in the district (street or alley) and is not affixed to the historic resource.

New Accessory Building: Partially Consistent

The proposed new construction will serve to restore the historic rhythm of the alleyway by replicating a traditional detached garage form. However, the alley-facing elevation will feature false windows rather than garage doors.

Front Yard Fence: Inconsistent

As noted, the front fence is not a prevalent landscape element in Kenwood but will feature a low profile and be reversible.

3. The extent to which the historic, architectural, or archaeological significance, architectural style, design, arrangement, texture and materials of the local landmark or the property will be affected.

Carport Demolition: Consistent

Although built within the period of significance, the carport not a typical historic feature of the district

New Accessory Building: Consistent

The proposed new construction will serve to restore the historic rhythm of the alleyway by replicating a traditional detached garage form. Materials not used during the period of significance, including vinyl windows and cementitious fiberboard siding, will be employed in the new building. However, they will generally replicate the appearance of historic materials such as wood windows and wood siding. The non-historic materials will be installed at the new construction, and not used to replace existing historic materials on a historic resource. While perhaps not absolute best practice, staff considers their proposed application to provide an acceptable balance between the replication of historic design/texture, and
affordability. This is especially true given the fairly low visibility of the proposed new construction.

**Front Yard Fence: Consistent**

The fence will not affect the historic primary residence on the property and will constitute a reversible landscape element.

4. **Whether the denial of a Certificate of Appropriateness would deprive the property owner of reasonable beneficial use of his or her property.**

   Information not provided

5. **Whether the plans may be reasonably carried out by the applicant.**

   Consistent  
   There is no indication that the applicant cannot carry out the proposal.

6. **A COA for a noncontributing structure in a historic district shall be reviewed to determine whether the proposed work would negatively impact a contributing structure or the historic integrity of the district. Approval of a COA shall include any conditions necessary to mitigate or eliminate negative impacts.**

   Not applicable  
   The subject property is a contributing property.

**Additional Guidelines for New Construction**

In approving or denying applications for a COA for new construction (which includes additions to an existing structure), the Commission and the POD shall also use the following additional guidelines. Please note that only the proposed new shed construction is being discussed herein.

1. **The height and scale of the proposed new construction shall be visually compatible with contributing resources in the district.**

   Consistent  
   The proposed garage will have a beginning roofline of 10’ 4.5” and a roof peak of approximately 14’ 1.5”. This is generally consistent with historic one-story accessory buildings in the subject district.

2. **The relationship of the width of the new construction to the height of the front elevation shall be visually compatible with contributing resources in the district.**

   Consistent  
   The proposed garage will be 18’ wide. Typical historic detached single-car garages tend to be approximately 10’ to 12’ wide, and two-car detached garages and garage apartments are commonly 18’ to 24’ wide. Historic accessory buildings of 18’, 20’, and 24’ widths are present within the same alley-facing block face as the subject property, so staff finds the width to be appropriate. The proposed 5:12 roof pitch, resulting in a total height of just over 14’, is also consistent with nearby contributing accessory buildings.
3. The relationship of the width of the windows to the height of the windows in the new construction shall be visually compatible with contributing resources in the district.

**Consistent**  
Proposed windows at the south (interior-facing) elevation are 24 3/8” wide by 36 ¼” high. Exact dimensions of the false windows at the north (alley-facing) elevation are not specified. In each case, the windows’ (or alluded windows’) size is vertical in orientation, which is in keeping with predominant design principles of pre-war resources in the subject district.

4. The relationship of solids and voids (which is the pattern or rhythm created by wall recesses, projections, and openings) in the front facade of a building shall be visually compatible with contributing resources in the district.

**Consistent**  
Windows and doors at the south elevation are evenly spaced and traditionally proportioned. Side elevations feature no fenestration, which is not entirely uncommon for utilitarian accessory buildings. The false windows at the north elevation are evenly-spaced.

5. The relationship of the new construction to open space between it and adjoining buildings shall be visually compatible with contributing resources in the district.

**Consistent**  
The accessory building’s location at the rear (north) fence line is consistent with similar accessory buildings in the subject district.

6. The relationship of the entrance and porch projections, and balconies to sidewalks of the new construction shall be visually compatible with contributing resources in the district.

**Not applicable**  
The proposed building faces the rear alleyway. Its relationship with that element of the district is consistent with contributing resources.

7. The relationship of the materials and texture of the facade of the new construction shall be visually compatible with the predominant materials used in contributing resources in the district.

**Consistent**  
As noted above, proposed materials are non-traditional, however, the proposed Hardie Board mimics the texture of wood siding. It is considered to be appropriate as applied here, in the case of new construction.

8. The roof shape of the new construction shall be visually compatible with contributing resources in the district.

**Consistent**  
The proposed roof has a 5:12 front-gabled roof. This is consistent with comparable contributing resources.

9. Appurtenances of the new construction such as walls, gates and fences, vegetation and landscape features, shall, if necessary, form cohesive walls of enclosures along a street, to ensure visual compatibility of the new construction with contributing resources in the district.

**Consistent**  
The accessory building’s location at the rear (north) fence line is consistent with similar accessory buildings in the subject district.
10. The mass of the new construction in relation to open spaces, the windows, door openings, porches and balconies shall be visually compatible with contributing resources in the district.

Consistent The utilitarian nature of many of the accessory buildings (particularly garages) in the subject district results in comparably less fenestration than primary residences. Staff finds the proposed massing and rhythm of the accessory building to be generally in keeping with that found in the subject district.

11. The new construction shall be visually compatible with contributing resources in the district in its orientation, flow, and directional character, whether this is the vertical, horizontal, or static character.

Consistent The overall form, massing, and placement of the proposed accessory building are perhaps the key elements in creating a structure that blends in with the surrounding alley-scape. These characteristics are in keeping with surrounding accessory buildings.

12. New construction shall not destroy historic materials that characterize the local landmark or contributing property to a local landmark district. The new construction shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the local landmark and its environment, or the local landmark district.

Consistent Although the proposed accessory building’s construction calls for the demolition of a carport constructed over 50 years ago, the proposed replacement is, in this instance, more appropriate to the primary residence’s period of initial construction and relocation to Kenwood than the existing structure.

13. New construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the local landmark and its environment would be unimpaired.

Consistent

Summary of Findings
Staff evaluation yields a finding of the following criteria being met by the proposed project:

- Carport Demolition:
  - General Criteria for Granting Certificates of Appropriateness: 4 of 4 relevant criteria met.

- New Accessory Building:
  - General Criteria for Granting Certificates of Appropriateness: 4 of 4 relevant criteria met or partially met.
  - Additional Guidelines for New Construction: 12 of 12 relevant criteria met or generally satisfied.
Front Yard Fence:

o General Criteria for Granting Certificates of Appropriateness: 2 of 4 relevant criteria met.

Staff Recommendation and Conditions of Approval

Based on a determination of general consistency with Chapter 16, City Code of Ordinances, staff recommends that the Community Planning and Preservation Commission approve with conditions the Certificate of Appropriateness request for the alteration of the property 3225 8th Ave. N., subject to the following:

1. Replacement windows will feature contoured, three-dimensional external muntins.
2. Windows will be installed to be setback within the wall plane and feature a reveal of at least two inches.
3. Trim will be constructed of Hardie board or wood, rather than proposed PVC.
4. Rear setback to be increased to 7’ per code for the subject property’s NT-2 zoning.
5. All other necessary permits shall be obtained. Any additional work shall be presented to staff for determination of the necessity of additional COA approval.
6. This approval will be valid for 24 months beginning on the date of revocation of the local Emergency Declaration.

AUTHORIZATION

By signing this application, the applicant affirms that all information contained within this application packet has been read and that the information on this application represents an accurate description of the proposed work. The applicant certifies that the project described in this application, as detailed by the plans and specifications enclosed, will be constructed in exact accordance with aforesaid plans and specifications. Further, the applicant agrees to conform to all conditions of approval. It is understood that approval of this application by the Community Planning and Preservation Commission in no way constitutes approval of a building permit or other required City permit approvals. Filing an application does not guarantee approval.

NOTES: 1) It is incumbent upon the applicant to submit correct information. Any misleading, deceptive, incomplete or incorrect information may invalidate your approval.
2) To accept an agent's signature, a notarized letter of authorization from the property owner must accompany the application.

Laura,
I was planning on building it out of wood and having it three feet tall. The plan is to have it match my porch railings (photo of my front porch attached. The posts will be 6x6 and the French made of 2x4 and a top 2x6. The posts spanning eight feet with a 5.5 matching gate at the front. On the sides of the property it will be on the property line and will end a foot prior to the sidewalk. I am also attaching a photo of what the proposed French will look like as well. The fence will be attached to the posts using L brackets and the entire fence will be painted white.
town and country fences - Google Se... capped pick...
Good morning Austin –

Yes, a fence would require a COA. Could you please send me a site plan and information on the proposed materials, so I can discuss with my manager how we should review it given the fact that our typical timelines have been thrown off by the pandemic situation? We discourage publicly-visible vinyl or chain-link fences in historic districts. There is some information on fencing in our Design Guidelines for Historic Properties.

Best regards,

Laura,

If I were to install a picket fence in the front yard, is this something I need pre-compliance permission before installation?

Good afternoon –

Yes, our office will provide you with an updated notice as soon as possible. Unfortunately I don’t yet know the rescheduled hearing date at this time but will let you know as more information becomes available. The Planning and Development Services Emergency Operation Procedure is attached for your information. Please let me know if you have any additional questions.

Best regards,

Laura Duvekot

N/m. I just saw your earlier cancellation email. I’m assuming a new Notice will therefore be mailed to me once it is rescheduled to put my neighbors on notice?

Dear Ms. Duvekot,

I, Austin Grinder, am scheduled to have a hearing on April 14, 2020, in regards to new proposed construction at my residence, 3225 8th Ave N. I was told that a Notice would be sent to me on March 16, for me to put my neighbors on notice of the hearing. I have not received this notice yet. In light of what is going on with the virus, has this Notice been sent to me and is this hearing still scheduled to proceed?

Thanks,

Austin Grinder
