Subject: St. Petersburg Pier Re-Design Proposal

This proposed rough sketch minimizes costs by "utilizing the existing Pier" through simple modifications of the current inverted triangle to a "sphere or globe" to better reflect the character of this world-class city as it continues to grow through steady redevelopment and reinvestment activity. The globe design would symbolize the world with its many countries represented by restaurants, shops, artisans, etc., on levels consistent with their respective latitude on the planet (e.g., Mediterranean & Latin Countries at the level of the equator; European & North American above; Southeast Asia, Indian & Australian below).

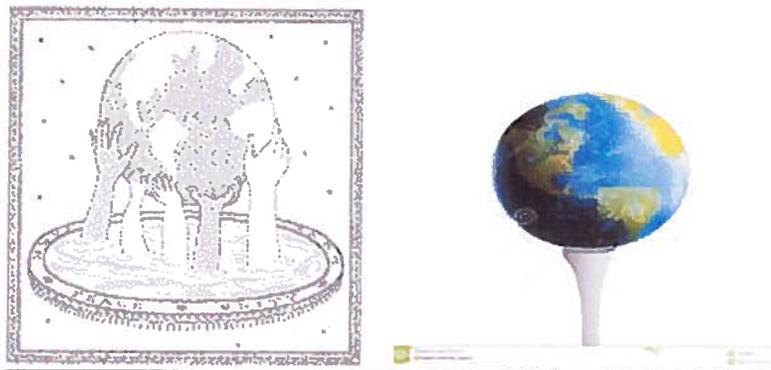

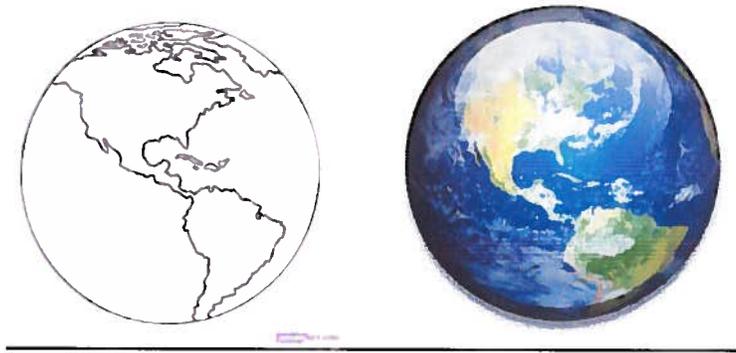

View facing St. Petersburg

Side View

Side Facing Tampa Bay

The "Globe and Base" could be modeled after some of the images listed below with the Globe being supported by a base represented by many different hands signifying our "multi-cultural or ethnically diverse" community. Another idea for supporting the Globe could be a large "Golf Tee" representing this very popular sport which appeals to many of our working class folks, business professionals, retirees and tourists who are looking forward to a relaxing weekend, living their retirement dream or are enjoying their vacations here in the Sunshine State.

Feel free to contact me at once at the number and/or email address listed below if you have any questions or require additional information.

Regards,
